Maxillofacial

INSTRUMENTS

Plastic Surgery Instruments

We can help you compare and reduce cost on these and other surgical instruments for use in plastic surgery: Plastic surgery procedures are performed to restore, alter, replace, or reconstruct areas of the body in areas such as skin, cranio and maxillofacial, musculoskeletal, hand, breast, and torso.

Types of instruments commonly used in plastic surgery include:

1. Awls, Chisels, Currettes, Gouges, and Mallets
2. Pliers, Osteotomes, Rasps, Rongeurs, and Wire and Pin instruments
3. Cannulas, Calipers, Gauges, Markers, and Rulers
4. Clamps, Forceps, Graspers, Elevators, and Spreaders
5. Dissectors, Elevators, Hooks and Probes
6. Endo Brow Lift Instruments, Knives, and Punches
7. Needle Holders and Needles

Vaishanav Surgial Co.

Following the 21st century vision of becoming a true global leader who can make its Customers worldwide through its quality products and services. We are dedicated to manufacturing and marketing instruments which provide practical Solutions to real life problems, And meet the needs of our customers. We insist on high quality, efficient manufacturing Teamwork, and integrity, growing from our deep respect and honour for god, our Employees, our vendors, our customers and all our other stakeholders.

We stand behind every product we offer. Each of us, from the production department To the sales department makes customer satisfaction a top priority.

The careful management of people and projects ensures we continue to enjoy our Reputation for providing excellent quality services to our customers. The most important part of our philosophy is to work in partnership with clients and This requires, in our view, direct contact between our clients and us from the word go.

We aim:

- >> To listen to our customers and exceed their expectations, ensuring they are completely Satisfied with our products, services and support so that they will continue working with us.
- >> To continue expanding our research programs in progressive technologies.
- >> To secure international recognition by adopting a global rather than local perspective And by achieving excellence in the quality of our instruments.
- >> To continue building our excellent team of top professionals through controlled expansion,

Watson Skin Graft Knife

- 30.5cm/12" length

Right handed
SF-09-90108

Left handed
SF-09-90109

The roller bar is smooth and does not oscillate or rotate in use. The graft thickness is controlled by slackening the locking nut and rotating the adjuster nut until the required thickness and then set by tightening the locking nut. The graft thickness is consistent as the roller bar can only be adjusted in parallel.

Braithwaite Skin Graft Knife

- 30.5cm/12" length

Right handed
SF-09-90110

Left handed
SF-09-90111

The grooved roller bar oscillates from side to side as well as rotating. The graft thickness is controlled by rotating the adjuster nuts at the end of knife, this will move the roller bar up or down.

Cobbett Skin Graft Knife

- 30.5cm/12" length

Right handed
SF-09-90112

Left handed
SF-09-90113

The grooved roller bar only oscillates from side to side. The adjustment for the thickness of the graft is the same as the Braithwaite knife.

Humby Skin Graft Knife

- 36.5cm/14¼" length

Right handed
SF-09-90114

Left handed
SF-09-90115

The grooved roller bar rotates and oscillates from side to side. The graft thickness is controlled by adjusting the thumb screws on top of the support pillars.

Silver Skin Graft Knife

- 19cm/7½" length

Tessier-Rowe Left Side

Oral blade

Nasal blade

These instruments are used for maxillary advancement in Le Fort I, II, or III procedures. A Large curvature of the blade prevents damage of the teeth. The oral blades are asymmetrical to adapt to the curvature of the palate which is often high and concave.

Tessier-Rowe Right Side

Smith Ramus Separator

- 23cm/9" length
- 12mm width

SF-09-90344

The superior ramus separator in conjunction with the sagittal split separator allows controlled separation of the superior ramus osteotomy cut. It's unique blade action exerts force over a broad surface area for maximum control. This instrument is also useful in "down facturing" the maxilla by placement at the zygomatic buttress osteotomy cut.
